

Customize the site home page by creating sections, then moving those sections up or down on the home page. Sections can be text & graphics, banners or posts. Separate sections with a spacer.

Home Page Sections

Section Set Up

Add a section, turn it on, and add a section title that can either be displayed or hidden. Once a section is set up, you can customize it based on the section type.

Text & Graphics

Use the text editor to create a text & graphics section. The section can contain text, images or videos.

Banners

Add one or more banners to this section by uploading a banner image, activating the banner, and giving it a name. As an option, schedule banners to appear and be removed or add a banner hyperlink.

Spacers

Separate sections by adding a spacer. Select a spacer color or add an optional line. Copy a spacer section to maintain the design.

Feature Boxes

Add a calendar, image or a video to feature on the home page. Select a background and title text color. Add a link to an image to link to a catalog.

Catalog Section

Add a catalog section to the home page. Name the section, change the layout, and select specific catalogs.

Positioning Sections

Move a section up or down on the home page to change the order that it appears.
